=====

Sample 1: The 'Daily Diary/30-Day Study'

People involved in romantic relationships completed an online survey once a day over the course of 30 days. Only one member of a couple was recruited; the data are not interdependent. For each wave, we assessed the following:

- Attachment security in four relationships (mother, father, partner, friend)
- the Big Five personality traits via the TIPI
- Relationship functioning (i.e., satisfaction, investment, commitment, viability of alternatives)
- Relationship and life events (e.g., most positive and negative event of the week and how the partner supported the subject or failed to do so)

We also included an additional questionnaire in each session that was selected at random from the following list of questionnaires: Depressive symptoms (CESD), attachment features and functions (e.g., Whoto), physical health symptoms (PILL), adult attachment via the ECR-R, the Big Five personality traits via the BFI, and socio-sexual attitudes.

Participants who reported a break-up at any point in the study answered the same base questions, as appropriate, and responded to items concerning the amount of separation protest, despair, and detachment they were experiencing post-breakup.

An initial questionnaire was administered that contained all of the surveys that were rotated in the daily assessments.

Caveats: The data in the initial assessment file were obtained via a different process than those obtained in the daily assessments. As such, it is not guaranteed that every person who participated in the initial assessment contributed to the daily assessment. Moreover, due to errors on the subject's part, there might be some users in the daily assessment data file for which no initial assessments exist (most likely due to them using a different ID for the two segments of the study. As (if) those issues get sorted out, I'll annotate this appropriately.

=====

File Name(s)

=====

There are two types of file associated with this project: Initial assessment data and daily surveys.

Daily Survey Data

[meta30days.sav - SPSS file] removed on April 19, 2012 and replaced with meta30days-corrected-web.sav

meta30days-corrected-web.sav - Corrected file April 19, 2012 - Fixes daily ECR-R scores

meta30daysfree.sav - SPSS file with free response data (see the Relationships Events section below)

Initial Assessment Data

meta30days-initial.sav - SPSS file

=====

Basic Information for meta30days-initial.sav

pin = ID code, sex (1 = male, 0 = female), relyears (relationship length years), relmonths (relationship length months), rlength (total number of months the couple has been together: relyears*12 + relmonths), ethnicity = ethnicity, reltype = type of relationship (casual, exclusive, engaged, married)

partner = partner's name. This was sub'd into some of the questions to make them more personal

date1 = date of initial session
 date 2 = time of initial session
 sex = sex (1 = female, 0 = male)
 age = age
 agep = age of partner
 sexp = sex of partner
 reltype = type of relationship at start of study (exclusive, married, engaged)
 ethnicity = ethnicity of subject
 ethnicityp = ethnicity of partner
 relengthyears = years together
 relenghtmonth = months together (within year)
 rlength = total number of months together (years * 12 + months)

=====

Relationship Structures Inventory for Assessing Attachment in Context

va01 - va10 = mother items
 vb01 - vb10 = father items
 vc01 - vc10 = partner items
 vd01 - vd10 = best friend items

Composite variables:

avoida anxietya = anxiety and avoidance with father
 avoidb anxietyb = anxiety and avoidance with mother
 avoidc anxietyc = anxiety and avoidance with partner
 avoidd anxietyd = anxiety and avoidance with friend

=====

TIPI Personality Traits
 vp01 - vp10 = TIPI Items

Composites:

tipie = extroversion
 tipia = agreeableness
 tipic = conscientiousness
 tipin = neuroticism
 tipio = openness

=====

Satisfaction and Commitment
 vrusbult01 - vrusbult22

Composite variables:
 commit = commitment
 satisfaction = satisfaction

alternatives = desirability of alternatives
investment = investment in relationship

=====

Depression CESD
vcesd1 - vcesd24

Composites:
cesd = composite of depressive symptomology

=====

Personality Traits: Big Five Inventory
vbfi1 - vbfi45

Composites:

bfi_e = extroversion
bfi_a = agreeableness
bfi_n = neuroticism
bfi_c = conscientiousness
bfi_o = openness
bfi_p = physical attractiveness

=====

Physical Symptoms (PILL)
pill1- pill54
1 = checked/yes
0 = not endorsed

Composite

pill = average of the 1/0 responses. (Proportion of symptoms endorsed)

=====

Attachment Features and Functions
vwhotol-vwhoto40

Composites:

whotopartner = overall extent to which the person uses his or her partner as an attachment figure
whotoparent = overall extent to which the person uses his or her parents as attachment figures

Whoto style Attachment Functions
vwhoto41-vwhoto46
0 = none of the response options were selected

=====

Experiences in Close Relationships-Revised
vecr1-vecr36

anx_ecr = anxiety scale of the ECRR
avo_ecr = avoidance scale of the ECRR

=====

CSQ (Cognitive Style Questionnaire)
vcsq1-vcsq42

Measure included for Ben Hankin. Includes free responses. No composites made.
Item 36 not saved correctly.

=====

Variable Keys and Information

Daily Assessment Wave Data

meta30days.sav ---> meta30days-corrected-web.sav

=====

Daily Survey Data

People were assessed once a day over the course of 30 days. Data for separate assessment waves are represented with 01, 02, etc. at the end of each variable label (e.g., avoid01, avoid02, ..., avoid60). For the purposes of compiling the data, I assumed that there were no more than 30 waves of data although a few people did take the survey for more than 30 days; those additional data are not represented here.

Missing data are represented as 0's and dots (.) throughout the datafile. Some kind of search and replace process should be used to recode these 'responses' to a common missing data metric. For those interested, it should be noted that 0's are used in slots where data do not exist (e.g., a person dropped out of the study and has no data for the last 10 waves) and dots or blank spaces are used represent non-responses in waves in which other questions were answered by the participant in question. There are a few exceptions to this general rule and I elaborate as needed in each section below.

I have not formally unified the missing data format in this file because there is a small chance I'll recompile the data from scratch at a later point to add some new variables. It would be most efficient to simply distribute newly compiled versions of the dataset and let individual investigators recode missing data as they see fit. At some point I'll try to paste some easy to copy-and-paste syntax here for people to use.

=====

Attachment in Context: The Relationship Structures inventory

The following are the avoidance and anxiety composites for 4 relationship types

a = relationship with mother (e.g., avoida01)
b = relationship with father (e.g., anxietyb02)
c = relationship with partner (e.g., anxietyc04)
d = relationship with best friend (e.g., anxietyd05)

These composites are based on the Relationship Structures inventory

The 01, 02, ... 30 suffixes reference the assessment wave for which the data were collected.
Note: Only 3 anxiety items are used to create the anxiety composites. Item 10 tends to cross load too highly.

```
'avoida01,avoida02,avoida03,avoida04,avoida05,';
'anxietya01,anxietya02,anxietya03,anxietya04,anxietya05,';

'avoidb01,avoidb02,avoidb03,avoidb04,avoidb05,';
'anxietyb01,anxietyb02,anxietyb03,anxietyb04,anxietyb05,';

'avoidc01,avoidc02,avoidc03,avoidc04,avoidc05,';
'anxietyc01,anxietyc02,anxietyc03,anxietyc04,anxietyc05,';

'avoidd01,avoidd02,avoidd03,avoidd04,avoidd05,';
'anxietyd01,anxietyd02,anxietyd03,anxietyd04,anxietyd05,';
```

Important note: For participants who experienced a breakup, they were asked to answer the

partner questions with respect to their former partner.

=====

Relationship Quality and Investment

Rusbult, C. E; Martz, J. M.; Agnew, C. R. (1998) The Investment Model Scale: Measuring commitment level, satisfaction level, quality of alternatives, and investment size. *Personal Relationships*, 5, 357-391.

Satisfaction, Commitment, Desirability of alternatives, and Investment

```
'satis01,satis02,satis03,satis04,satis05,';
'commit01,commit02,commit03,commit04,commit05,';
'altern01,altern02,altern03,altern04,altern05,';
'invest01,invest02,invest03,invest04,invest05,';
```

Breakup participants did not answer these questions.

=====

Ten Item Personality Inventory (TIPI). Big Five Traits assessed each day.
Self-reports

Gosling, S. D., Rentfrow, P. J., & Swann, W. B., Jr. (2003). A Very Brief Measure of the Big Five Personality Domains. *Journal of Research in Personality*, 37, 504-528.

```
tipie = Extroversion
tipia = Agreeableness
tipic = Conscientiousness
tipin = neuroticism
tipio = Openness
```

```
tipie01, tipie02 .... tipie30
```

These questions were administered regardless of breakup status.

=====

Relationships Events

In each assessment we asked people to think of one negative event and one positive event from the day and answer some questions about how they felt and how their partner responded to them.

Negative Event

Basic instruction: Think back upon the past day and recall one of the worst moments of your day. This experience may or may not have involved your partner.

```
thisEventna = vcn8= Was the event specific to your relationship (e.g., a fight
between you and your partner)?
1= Yes
```

```
thisEventnb = vcn9 = If not, did you share the experience with your partner (e.g.,
is he or she aware of this event and how it made you feel)?
1 = Yes
```

```
neg01-neg60 = how negative the negative event was (item cn7 below)
print INFO 'neg01,neg02,neg03,neg04,neg05,
```

```
$cn1 = 'My partner blamed me for the event.';
```

```
$cn2 = 'My partner assured me that everything would be okay.';
$cn3 = 'My partner understood my concerns.';
$cn4 = 'My partner thought I was being irrational or overreacting.';
$cn5 = 'My partner essentially ignored my concerns.';
$cn6 = 'My partner made me feel better about the experience.';
$cn7 = 'The experience in general was a very negative one.';
```

careneg01 - careneg60 = a composite of all the supportive responses for the positive event (see above), cn1-c6, items 1, 4, and 5 reverse keyed.

```
print INFO 'careneg01,careneg02,careneg03,careneg04,careneg05,
```

Participants were also given the opportunity to describe, via free response, the event in question. The free response data are stored in the file meta30daysfree.sav.

negative01-negative30

Positive Event

Instruction: Think back upon the past week and recall one of the best moments of your day. This experience may or may not have involved your partner.

```
thisEventtpa = cp8 = Was the event specific to your relationship (e.g., you and your
partner had a fun date)?
```

```
1 = Yes
```

```
thisEventtpb = cp9 = If not, did you share the experience with your partner (e.g., is
he or she aware of this event and how it made you feel)?
```

```
1 = Yes
```

```
pos01-pos60 = how positive the positive event was (item cp7 below)
```

```
print INFO 'pos01,pos02,pos03,pos04,pos05,
```

```
$cp1 = 'My partner was proud of me.';
```

```
$cp2 = 'My partner was interested.';
```

```
$cp3 = 'My partner didn't seem to truly understand why the experience was a positive
one.';
```

```
$cp4 = 'My partner encouraged me to share the experience with him or her.';
```

```
$cp5 = 'My partner downplayed the significance of the experience.';
```

```
$cp6 = 'Sharing the experience with my partner made it even better.';
```

```
$cp7 = 'The experience in general was a very positive one.';
```

carepos01 - carepos60 = a composite of all the supportive responses for the negative event (see above), cn1-c6, with items 3 and 5 reverse keyed.

```
print INFO 'carepos01,carepos02,carepos03,carepos04,carepos05,
```

Participants were also given the opportunity to describe, via free response, the event in question. The free response data are stored in the file meta30daysfree.sav. "Please tell us a little bit about the experience."

positive01-positive30

Life Events

These were checkbox responses. 1= Yes. nonchecks and missing data are represented as 0's and .'s respectively in the SPSS file.

```
relevents01 = 'my partner and I got into an argument';
```

```
relevents02 = 'my partner did something special for me';
```

```
relevents03 = 'someone in my family passed away';
```

```
relevents04 = 'my partner and I were separated this week due to travel';
```

```

relevents05 = 'my partner and I were able to spend quality time together this week';
relevents06 = 'we found out we were pregnant';
relevents07 = 'I accomplished something I was proud of at work/school';
relevents08 = 'my partner and I got engaged';
relevents09 = 'my partner and I moved in together';
relevents10 = 'my partner and I got married';
relevents11 = 'my partner and I broke up';

```

variable labels have 01, 02, 03 ... 06 appended to end to represent assessment wave

```

print INFO 'relevents0101,relevents0102,relevents0103,
print INFO 'relevents0201,relevents0202,relevents0203,relevents0204,
print INFO 'relevents0301,relevents0302,relevents0303,

```

Breakup participants did not answer any of these questions.

Participants were also asked "Is there anything that has happened this week that you believe is significant, but not well represented in the items above? Please feel free to type anything that you deem relevant in the box below."; These data are stored in the file meta30daysfree.sav

extra01-extra30

=====

Breakup information

stillInvolved01-30 is a variable used to represent whether the participant was still involved with his or her initial partner. Currently coded as 2 = still involved and 1 = broken up.

=====

Rotating Inventories

The following surveys were administered at random =. One survey was randomly selected for each user each week.

=====

Avoidance and Anxiety scores from the ECR-R

Fraley, R. C., Waller, N. G., & Brennan, K. A. (2000). An item-response theory analysis of self-report measures of adult attachment. *Journal of Personality and Social Psychology*, 78, 350-365.

```

'avoidecrr01,avoidecrr02,avoidecrr03,avoidecrr04,avoidecrr05,';
'anxietyecrr01,anxietyecrr02,anxietyecrr03,anxietyecrr04,anxietyecrr05,';

```

If there had been a breakup, the ECR-R was administered and participants were instructed to think about the former partner.

=====

Depression Items from the Center for Epidemiologic Studies Depression Scale (CES-D.) In a Format Similar to IPIP Items.

```

'cesd01,cesd02,cesd03,cesd04,cesd05,';

```

=====

The Five Factor Personality Traits. BFI

John, O. P., Naumann, L. P., & Soto, C. J. (2008). Paradigm Shift to the Integrative Big-Five Trait Taxonomy: History, Measurement, and Conceptual Issues. In O. P. John, R. W. Robins, & L. A. Pervin (Eds.), *Handbook of personality: Theory and research* (pp. 114-158). New York, NY: Guilford Press.

bfie = Extraversion
 bfia = Agreeableness
 bfic = Conscientiousness
 bfin = neuroticism
 bfio = Openness
 bfip = a self-report of physical attractiveness

bfie01, bfie02,...bfie30

=====

Who is your attachment figure? The Tancredy and Fraley (2006) measure and the Fraley & Davis (1997) WHOTO adaptation

whotopartner = composite measure of the extent to which the partner is used as an attachment figure

whotoparent = composite measure of the extent to which the primary parent is used as an attachment figure

Based on Tancredy & Fraley

'whotopartner01,whotopartner02,whotopartner03,whotopartner04,whotopartner05,';
 'whotoparent01,whotoparent02,whotoparent03,whotoparent04,whotoparent05,';

Whoto 'pick someone' Self Report. Fraley & Davis (1997)

<OPTION VALUE = 'mother'>mother</OPTION>
 <OPTION VALUE = 'father'>father</OPTION>
 <OPTION VALUE = 'partner'>partner</OPTION>
 <OPTION VALUE = 'friend'>friend</OPTION>
 <OPTION VALUE = 'sibling'>sibling</OPTION>
 <OPTION VALUE = 'other'>other</OPTION>

If there had been a breakup, the partner option of the pulldown menu was changed to read 'former' partner.

whotoa01-30 1. Who is the person you most like to spend time with?

 whotob01-30 2. Who is the person you don't like to be away from?

 whotoc01-30 3. Who is the person you want to be with when you are feeling upset or down?

 whotod01-30 4. Who is the person you would count on for advice?

 whotoe01-30 5. Who is the person you would want to tell first if you achieved something
 good?

 whotof01-30 6. Who is the person you can always count on?

nodata = missing data
 0 = no response selected

=====

The Pennebaker Inventory of Limbic Languidness (the PILL)

Summed composite of symptoms. Larger numbers = greater self-reports of physical problems

'pill01,pill02,pill03,pill04,pill05,...';

Missing data/non-selected options = -1. This was used to help differentiate sums of zero from missing data.

=====

Socio-sexual attitudes

This is a measure developed by Lee Kirkpatrick and one of his students to *separately* assess restricted and unrestricted sexual attitudes.

soiu01-soiu30 = Unrestricted sexual attitudes
soir01-soir30 = Restricted sexual attitudes

Jackson, J. J., & Kirkpatrick, L. A. (2007). The structure and measurement of human mating strategies:
Toward a multidimensional model of sociosexuality. *Evolution and Human Behavior*, 28, 382–391.

Webster, G. D., & Bryan, A. (2007). Sociosexual attitudes and behaviors: Why two factors are better than one. *Journal of Research in Personality*, 41, 917–922.
